

PROJECTINA

VISCDNX

**EXPERIENCE EFFICIENCY AND
COMFORT WITH OUR MOTORIZED
UNIVERSAL HOLDER**

projectina®

THE NEW VISIONX MOTORIZED UNIVERSAL HOLDER PROVIDES PRECISE, MOTORIZED ROTATION ON THREE AXES USING THE INCLUDED SPACEMOUSE® CONTROLLER OR VIA SOFTWARE.

- **Faster, more efficient examination**
Intuitive, motorized control of rotation, tilt and twist of bullets or cartridge cases. Examination is seamless, without ever looking away from the binocular or screen.
- **More comfortable examination over longer periods**
The SpaceMouse® controller allows the examiner to maintain ergonomic hand, wrist and elbow position, completely eliminating uncomfortable upward motion to manually rotate evidence.

Universal Control

- Accepts other VisionX mounting accessories such as brush mounts for cartridge cases and plasticine mounts for fragments.
- Includes a range of BULLETTRAX-compatible magnetized tips in different sizes.

Freedom of Movement

Six degrees of freedom with precision, motorized control of evidence:

- **Rotate** a bullet or cartridge case surface in a full 360 degrees
- **Tilt** to adjust for reflectance and examine uneven surfaces such as damaged bullets and fragments
- **Twist** to line up rifling marks and other striations
- **Translate in X and Y** planes with the joysticks to position evidence
- **Focus** using coarse, fine and super fine controls

Control all rotating axes smoothly and intuitively with the SpaceMouse® controller, and easily synchronize left and right sides to rotate evidence simultaneously.

Efficiency

- One-touch button to jump to the next LEA/GEA on a bullet to confirm matching areas more quickly and easily.
- Position cartridge case headstamp according to established protocols, and store the position to return after viewing other regions of interest.
- Tilt cartridge case, and rotate the surface area to view extractor and chamber marks.

Remote Collaboration

- Allows remote-operator complete control over evidence rotation and positioning.
- Less local-operator manipulation allows for seamless remote confirmation of bullet or cartridge cases matches.
- Facilitates training opportunities and peer reviews.
